

Mountaineer 6X Carbon Fiber Tripod Legs

Main features:

Weight:	1370 g
Minimum height:	65 cm
Maximum height:	161 cm
Load capacity:	12 kg

Other features:

The main feature of the range is the 6X carbon fiber tube, made of a unique structure of 6 crossed layers that maximises rigidity, vibration absorption and lightweight performance. 6X tube has a high density structure made of top quality ultra-thin carbon fibers. Built-in Anti Leg Rotation is now a feature of the whole carbon fiber range. Mountaineer tripods have been further improved with features and details that increase performance, versatility and quality.

Bubble level enables to always keep all hardward straight.

Easy and quick adjustment of the equipment on uneven surfaces.
